Reflection Free[®]

Relief from glare and reflections

Just what you
want to see.

BETTER.

REFLECTION FREE*

Giving your eyes a break

Glare and reflections cause eyes to work harder. That creates eyestrain and fatigue. But Reflection Free

lenses drastically reduce glare. So your vision is more comfortable.

- Fewer headaches from harsh artificial light at work
- More comfortable computer use
- Less eye fatigue when watching television

Letting the light pass through

To see clearly, your eye needs light. Yet without Reflection Free, as little as 85% of light passes through your lens and into your eye. The rest is reflected away.

Reflection Free lets up to 99% of light pass through your lens. And into your eye. So vision is clearer and more crisp.

- Your lens is no longer a barrier to light
- More light enters your eye
- Your vision is clearer
- You'll see better than ever before

At night, reassurance behind the wheel

When you drive at night, glare is more than a nuisance. It's a genuine safety concern. The risks include:

- blinding glare from oncoming headlights,
- delayed reaction time,
- halos that cause visual fatigue.

Reflection Free reduces the glare created by oncoming headlights. So nighttime driving is less hazardous.

What every lens should be. Invisible.

You want people to see your eyes clearly. But reflections block your eyes and draw unwanted attention to the lens itself. With Reflection Free, people see exactly what you want them to—your eyes, not your lenses.

The Word is Out

Discover what millions of Americans already know—that anti-reflective lenses are vital to visual performance. Just look at a survey of anti-reflective lens wearers:

90%

ranked sharpness of vision as the most important benefit that their anti-reflective lenses gave them

91%

were satisfied with the performance of their anti-reflective lenses

94%

would buy anti-reflective lenses again

Many satisfied wearers already enjoy the difference anti-reflective lenses make. You can too. Just ask your eye care professional about Reflection Free lenses.
